meetup.com/Rust-Oslo

What is WebAssembly?

An assembly language for the web2

- 1: Except it's not really an assembly language as such.
- 2: Not web-specific so also useful for a lot of other stuff.

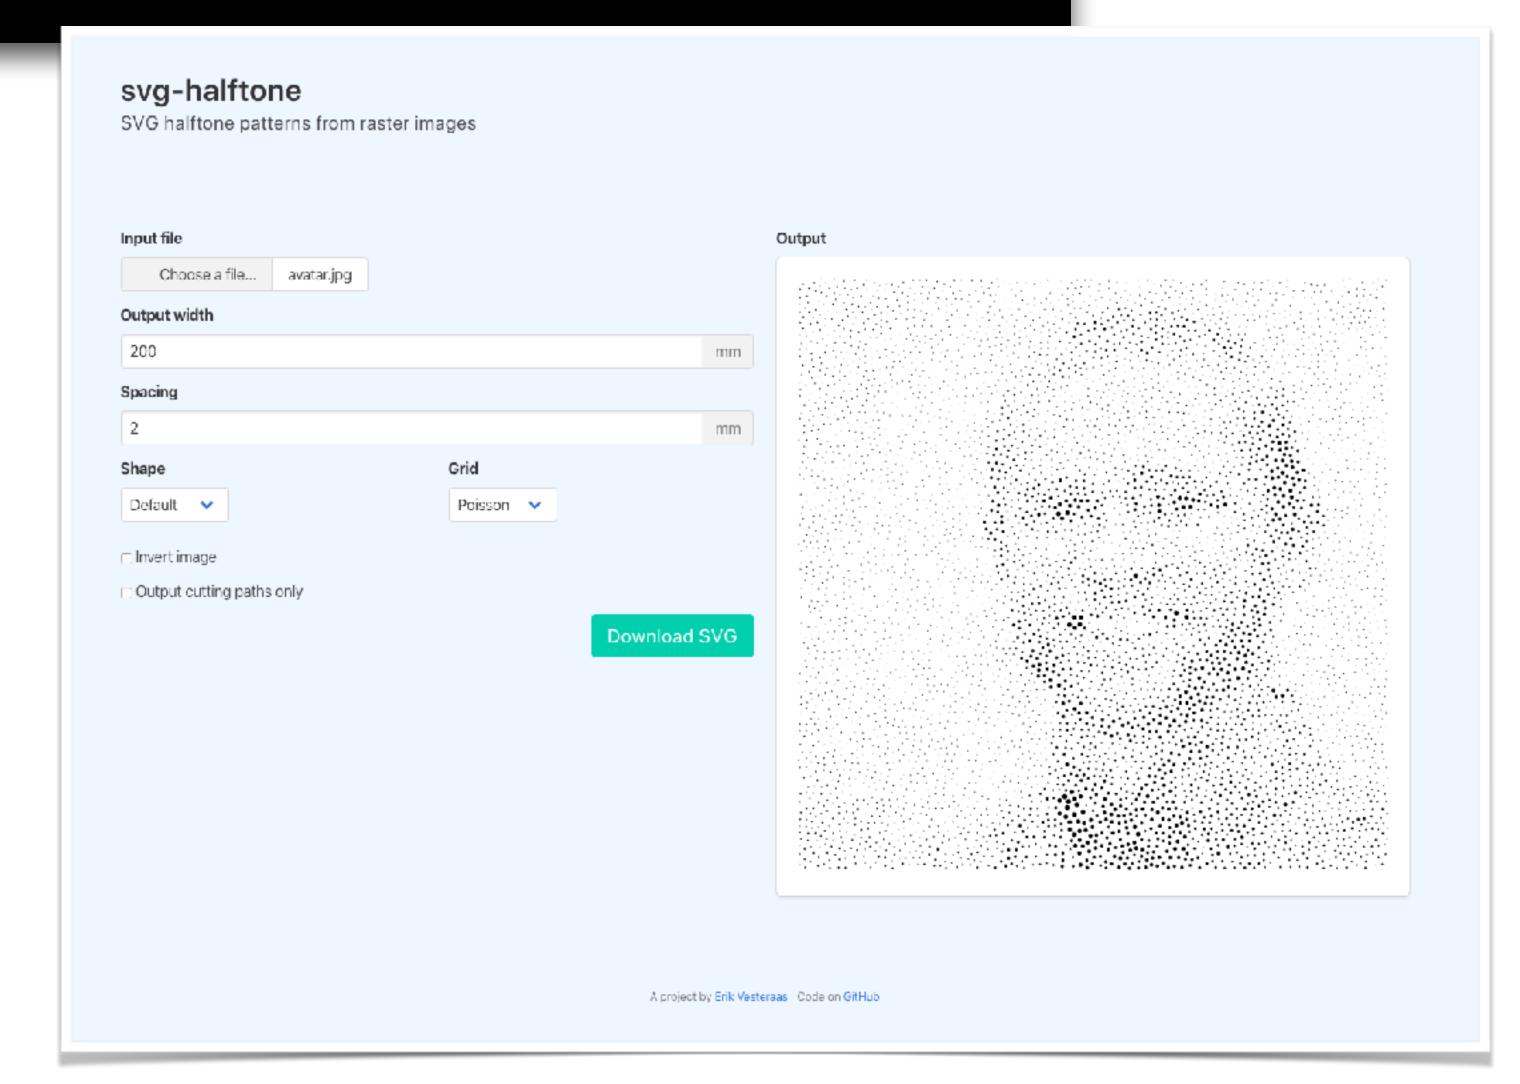

Wat?

```
> cat factorial.wat
(module
 (func $fac (export "fac") (param f64) (result f64)
   local.get 0
   f64.const 1
   f64.lt
   if (result f64)
     f64.const 1
                                   wat2wasm
   else
     local.get 0
                                                webassembly.github.io/wabt/demo/wat2wasm/)
     local.get 0
     f64.const 1
                    wasm2wat
     f64.sub
     call $fac
     f64.mul
                                   hexyl factorial.wasm
   end))
```

WebAssembly IMVP

Only:

Four value types (i32, f32, i64, f64),

Functions on value types

Linear memory

No garbage collection primitives

No threads

Why Rust?

Let's start coding!
